## GCSE **PHYSICS**

**Higher Tier** 

Friday 14 June 2019

Morning

### Time allowed: 1 hour 45 minutes

#### Materials

For this paper you must have:

- a ruler
- a scientific calculator
- a protractor
- the Physics Equations Sheet (enclosed).

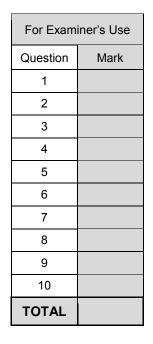

#### Instructions

- Use black ink or black ball-point pen.
- Fill in the box at the top of this page.
- Answer all questions in the spaces provided.
- Do not write outside the box around each page or on blank pages.
- Do all rough work in this book. Cross through any work you do not want to be marked.
- In all calculations, show clearly how you work out your answer.

Paper 2

#### Information

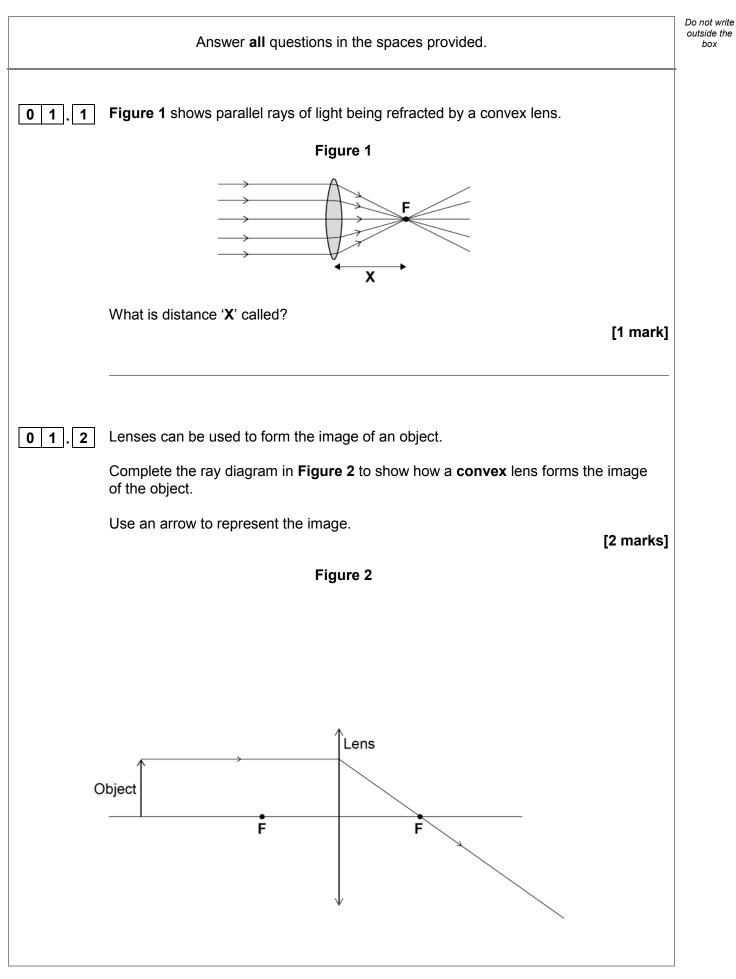

- The maximum mark for this paper is 100.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- · You are reminded of the need for good English and clear presentation in your answers.

IB/G/Jun19/E20

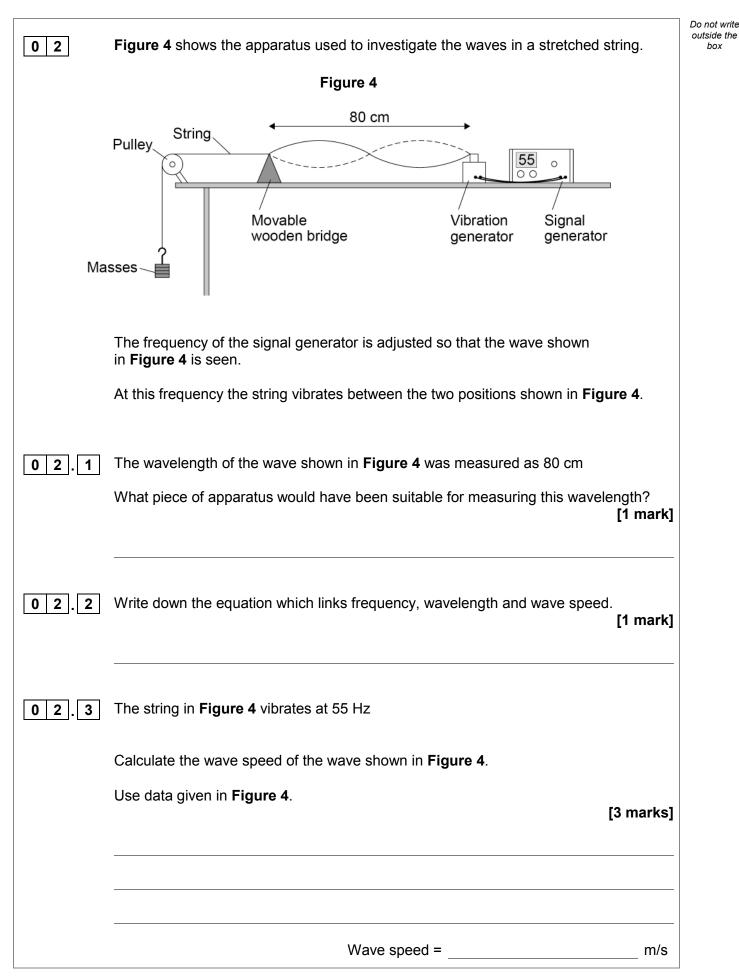

|      | Figure 3 shows how a concave lens forms the image of an object.   | Do not write<br>outside the<br>box |
|------|---|------------------------------------|
|      | Figure 3  |                                    |
|      | Object<br>F Image   |                                    |
| 01.3 | Give <b>one</b> similarity and <b>one</b> difference between the image formed by the convex lens<br>and the image formed by the concave lens.<br>[2 marks]<br>Similarity  |                                    |
|      | Difference  |                                    |
| 01.4 | A person uses a lens to read the letters on the back of a coin.<br>The image height of the letters on the coin is 9.0 mm<br>The magnification produced by the lens is 6.0 |                                    |
|      | Calculate the height of the letters on the coin.<br>Use the Physics Equations sheet.<br>[3 marks]   |                                    |
|      | <br>  |                                    |

| 02.4 | The frequency of the signal generator is increased.  | Do not wr<br>outside th<br>box |
|------|--|--------------------------------|
|      | This makes the wavelength of the wave change.  |                                |
|      | The wave speed stays the same.   |                                |
|      | Describe how the apparatus could be adjusted to show one complete wave without reducing the frequency. |                                |
|      | [2 marks]  |                                |
|      |  |                                |
| 02.5 | A student wants to investigate how the speed of a wave on a stretched string depends                   |                                |
|      | on the tension in the string.<br>The student uses the apparatus in <b>Figure 4</b> .                   |                                |
|      |  |                                |
|      | Describe a method the student could use for this investigation. [4 marks]                              |                                |
|      |  |                                |
|      |  |                                |
|      |  |                                |
|      |  |                                |
|      |  |                                |
|      |  |                                |
|      |  |                                |
|      |  |                                |
|      |  |                                |
|      |  |                                |
|      |  |                                |
|      |  | 11                             |

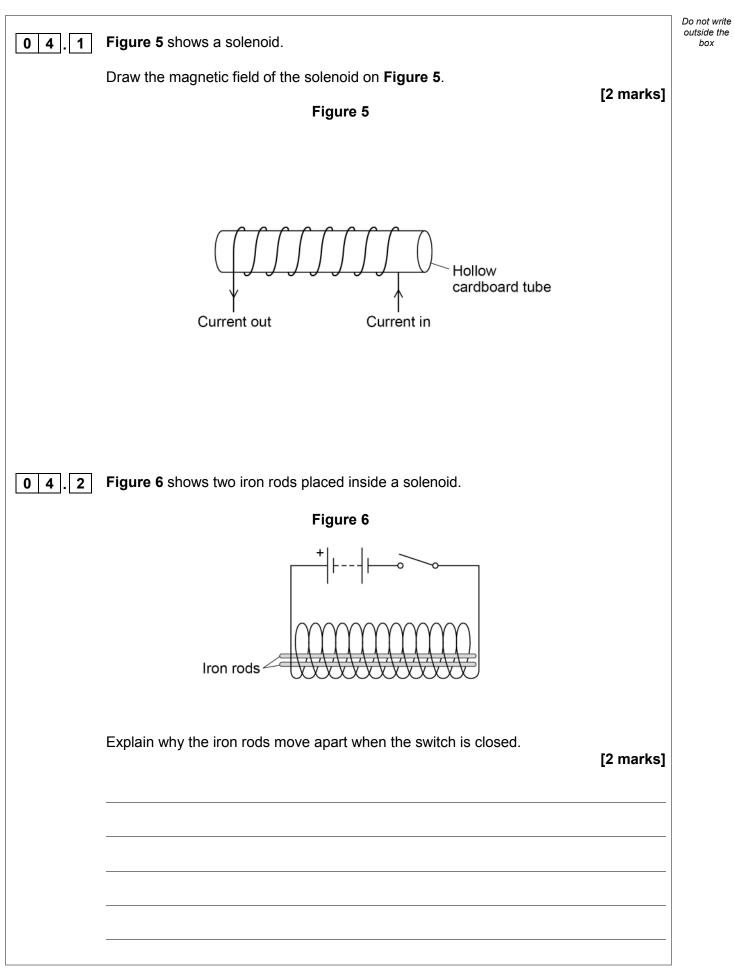

| 3.1 | The driver of a vehicle sees a hazard on the road.   |
|-----|--|
|     | The driver uses the brakes to stop the vehicle.  |
|     | Explain the factors that affect the distance needed to stop a vehicle in an emergency. [6 marks] |
|     |  |
|     |  |
|     |  |
|     |  |
|     |  |
|     |  |
|     |  |
|     |  |
|     |  |
|     |  |
|     |  |
|     |  |
|     |  |
|     |  |
|     |  |
|     |  |

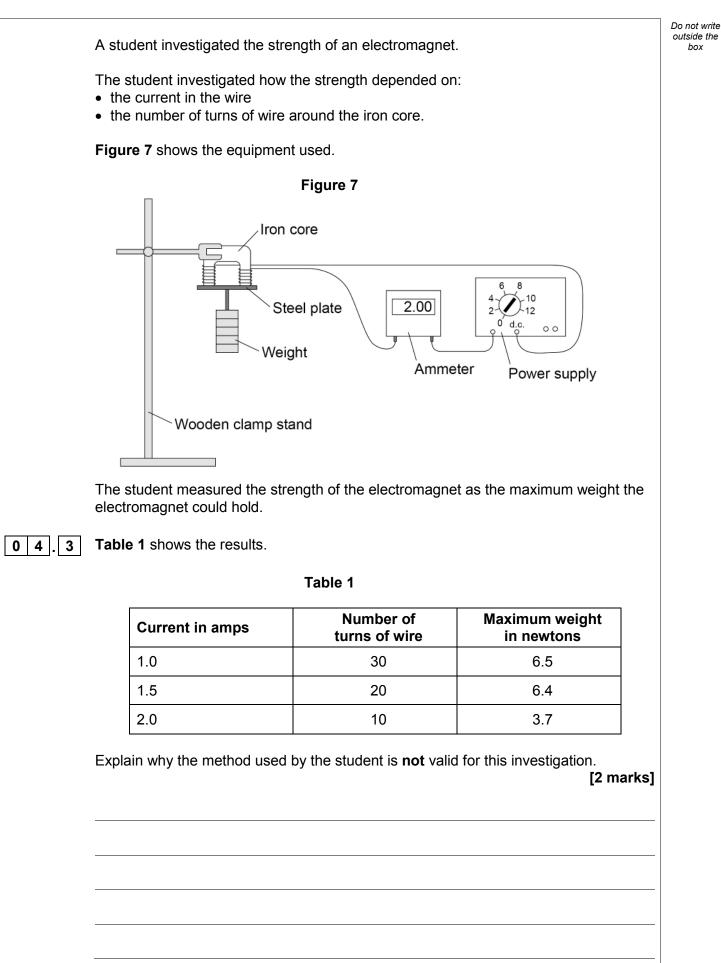

| 03.2 | Write down the equation which links distance, force and work done. [1 mark]                      | Do not write<br>outside the<br>box |
|------|--|------------------------------------|
|      |  |                                    |
| 03.3 | The work done by the braking force to stop a vehicle was 900 000 J                               |                                    |
|      | The braking force was 60 000 N   |                                    |
|      | Calculate the braking distance of the vehicle. [3 marks]   |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |
|      | Braking distance = m   |                                    |
|      |  |                                    |
| 03.4 | The greater the braking force, the greater the deceleration of a vehicle.                        |                                    |
|      | Explain the possible dangers caused by a vehicle having a large deceleration when it is braking. |                                    |
|      | [2 marks]  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  | 12                                 |
|      | Turn over for the next question  |                                    |

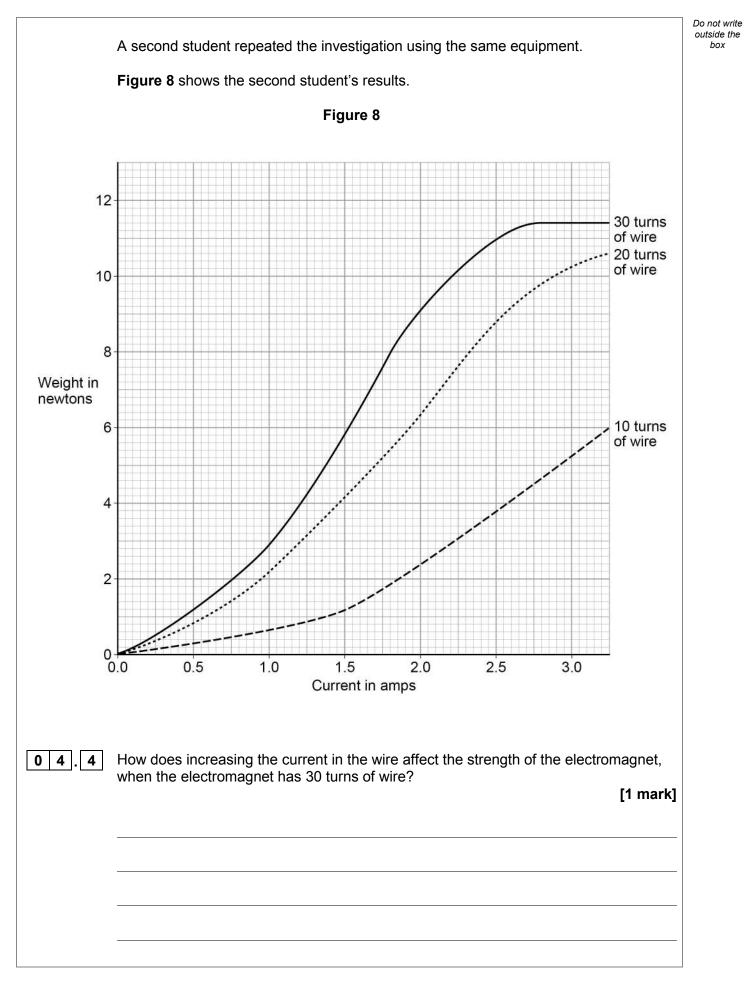

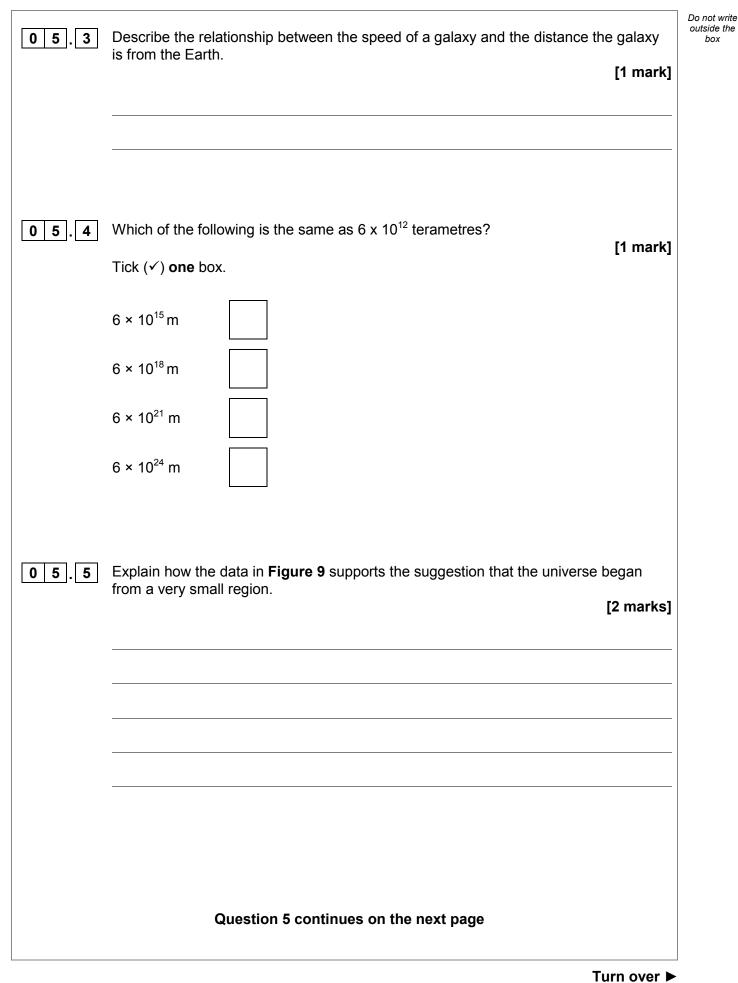

| 0 4.5 | How does increasing the number of turns of wire from 10 to 20 affect the strength of the electromagnet, compared to increasing the number of turns of wire from 20 to 30? [1 mark] | Do not write<br>outside the<br>box |
|-------|--|------------------------------------|
|       |  |                                    |

|      |  |                                    |
|      |  | I                                  |

**0 9**. **1 Table 3** gives the frequencies in the hearing ranges of five different animals.

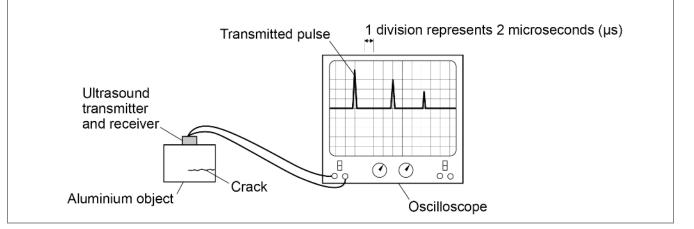

| Table 3 |                              |
|---------|------------------------------|
| Animal  | Frequencies of hearing range |
| Cat     | 55 Hz to 77 kHz              |
| Chicken | 125 Hz to 2 kHz              |
| Dog     | 20 Hz to 30 kHz              |
| Gerbil  | 56 Hz to 60 kHz              |
| Horse   | 55 Hz to 33 kHz              |

Which one of the animals from Table 3 would not be able to hear ultrasound?

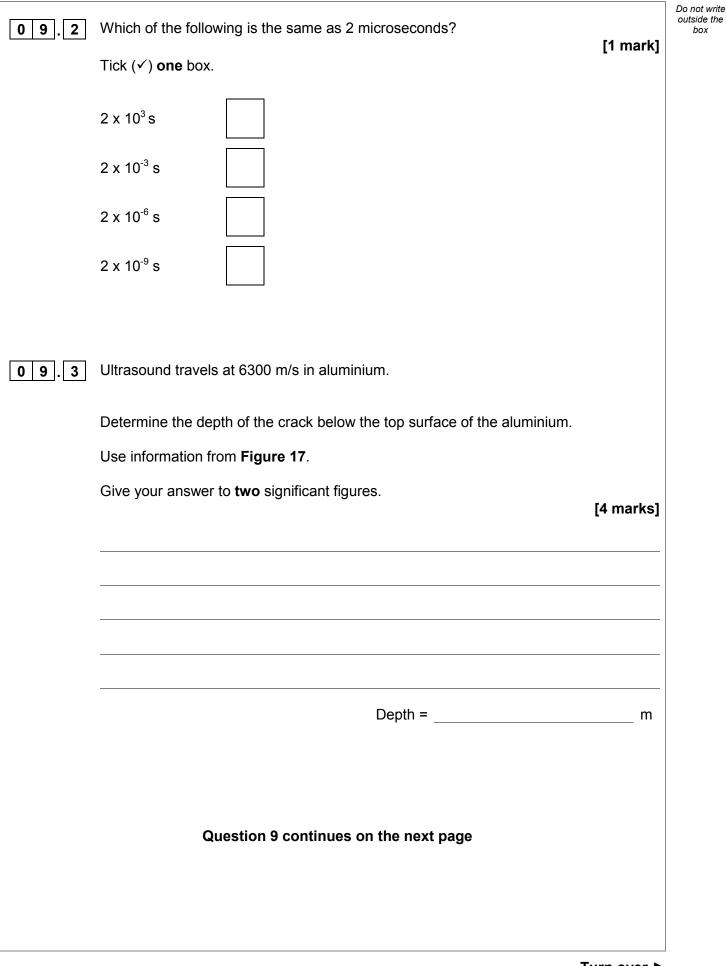

[1 mark]

**Figure 17** shows ultrasound being used to detect a hidden crack in a solid aluminium object. The transmitted and reflected pulses of ultrasound are shown on the screen.
