

0 1

The diagram shows the apparatus used to investigate the effect of concentration of hydrochloric acid on the rate of reaction with marble chips. The gas produced is collected in the gas syringe.

The results of the experiment are shown in the graph below.

0 1

1

Use the graph to describe the changes in the rate of the reaction over the first 35 seconds.

[3 marks]

The experiment was repeated using the following conditions.

The mass and surface area of the marble chips was the same.

The volume and temperature of the hydrochloric acid was the same. The concentration of the hydrochloric acid was reduced.

0	1	.	2
---	---	---	---

The rate of the reaction decreased. **On the graph**, sketch a line to show the result you would expect for the above conditions.

[1 mark]

0	1	.	3
---	---	---	---

Use your knowledge of particles to explain why the rate of the reaction decreased.

0	1	.	4
---	---	---	---

The purpose of the experiment was to see the affect of concentration on the rate of this reaction. Why was it important to keep the temperature the same for the second experiment?
